New Product launch PIX-WoodCrafter™

🕒 03/03/2025

PIX is pleased to introduce the PIX-WoodCrafter™ range of Belts, specifically designed for use in heavy-duty edge-banding machines. These machines are commonly used in woodworking to cover the exposed edges of materials such as PVC, uPVC, PP, ABS, PMMA, and other similar materials, particularly in the edge-banding process for plywood.

The PIX-WoodCrafter™ Belt is engineered to withstand the rigorous demands of edge-banding and material handling, ensuring efficiency and reliability over time.

Key Features:

- The moulded top profile rubber and bareback construction provide optimal cushioning and grip for seamless operation.
- The abrasion-resistant compound ensures robust performance in tough working conditions.
- High tensile strength minimises elongation, enhancing operational life and reducing maintenance costs.
- Stringent dimensional tolerance creates uniform pressure, essential for plywood banding in assembly lines and bulk material handling.
- Temperature range: -18°C to +80°C.

For more details on the product, please check the following link: [Catalogue PIX-WoodCrafter™](#)

This product is now available on a made-to-order basis. For any commercial-related information, customers are encouraged to contact their relationship representative at PIX. For more details on the product range, visit www.pixtrans.com.
